

Week 2

AI Fluency Assignment 2: The Prompt Ladder

Name: Sibgha Mursaleen

Date: 13 July 2026

Baseline Prompt

Prompt

Build me a landing page.

Output

Version 1

Layer Added

Audience

Prompt

Build me a landing page for an AI startup that targets early-stage SaaS founders.

Output

What changed in the prompt?

I added a specific audience: early-stage SaaS founders.

What improved in the output?

The landing page became more focused on startup founders instead of a general AI audience. The messaging felt more relevant to the intended users.

What still failed?

The AI still didn't understand why I was building the landing page, so the content remained fairly generic.

What I would try next

Provide context about the purpose of the landing page.

Version 2

Layer Added

Context

Prompt

Build me a landing page for an AI startup that targets early-stage SaaS founders.

This website is for my frontend portfolio. Its purpose is to demonstrate that I can design modern, polished landing pages that help new startups look credible and trustworthy from day one.

Output

What changed in the prompt?

I added the purpose and background for the project.

What improved in the output?

The content aligned better with my portfolio goals and focused more on credibility and first impressions instead of generic startup marketing.

What still failed?

The AI still decided its own page structure, which wasn't always the structure I wanted.

What I would try next

Specify the exact output format.

Version 3

Layer Added

Output Format

Prompt

Build me a landing page for an AI startup that targets early-stage SaaS founders.

This website is for my frontend portfolio. Its purpose is to demonstrate that I can design modern, polished landing pages that help new startups look credible and trustworthy from day one.

Present the result as a complete landing page structure with:

- Hero
- Features
- How It Works
- Testimonials
- Pricing
- FAQ
- Final CTA

Output

What changed in the prompt?

I specified the exact structure I wanted.

What improved in the output?

The response became much more organized and included all the important landing page sections in a logical order.

What still failed?

Although the structure improved, some of the copy still sounded generic.

What I would try next

Add quality criteria for the writing.

Version 4

Layer Added

Quality Criteria

Prompt

Build me a landing page for an AI startup that targets early-stage SaaS founders. This website is for my frontend portfolio. Its purpose is to demonstrate that I can design modern, polished landing pages that help new startups look credible and trustworthy from day one.

Present the result as a complete landing page structure with:

- Hero
- Features
- How It Works
- Testimonials
- Pricing
- FAQ
- Final CTA

Write the copy in a clear, professional, and trustworthy tone. Avoid generic marketing phrases, keep each section focused on one purpose, and make the page feel like it belongs to a funded startup.

Output

What changed in the prompt?

I added quality requirements for the writing.

What improved in the output?

The copy became more natural, professional, and believable. It felt less like a template and more like a real startup landing page.

What still failed?

Some sections were still longer than necessary and could be refined further.

What I would try next

Ask the AI to review its own work.

Version 5

Layer Added

Review Instructions

Prompt

Build me a landing page for an AI startup that targets early-stage SaaS founders.

This website is for my frontend portfolio. Its purpose is to demonstrate that I can design modern, polished landing pages that help new startups look credible and trustworthy from day one.

Present the result as a complete landing page structure with:

- Hero
- Features
- How It Works
- Testimonials
- Pricing
- FAQ
- Final CTA

Write the copy in a clear, professional, and trustworthy tone. Avoid generic marketing phrases, keep each section focused on one purpose, and make the page feel like it belongs to a funded startup.

After writing the landing page, review your own work and identify three specific improvements you would make to increase clarity, credibility, or conversion.

Output

What changed in the prompt?

I asked the AI to review and improve its own work.

What improved in the output?

The AI identified weaknesses in the landing page and suggested improvements for clarity, credibility, and conversion, making the final result more polished.

What still failed?

Some suggestions were useful, while others were subjective and still required my own judgment.

What I would try next

Test the prompt with different AI models and compare the results.

What still failed?

While the self-review produced useful suggestions, not all of them were improvements. Some recommendations were generic, so I still needed to decide which ones actually strengthened the landing page.

Self Review of Claude

Now the self-review you asked for. Three specific things I'd change:

1. The hero claim has no evidence behind it yet.

"Your product, your deck, and your careers page shouldn't look like three different companies" is a strong hook, but nothing in the hero backs it up before the visitor scrolls. I'd add a one-line proof point right under the CTA row — something like "Used across 40+ early-stage products" or a small strip of 3-4 muted logo marks — so the claim isn't resting entirely on the testimonials section, which is six scrolls away.

2. "Drift detection" is the most differentiated feature but it's buried as card 5 of 6.

It's the thing a generic Figma UI kit can't do, and it's what justifies an ongoing subscription instead of a one-time purchase. Right now it reads as one bullet among equals. I'd pull it into its own short section between Features and How It Works, with a small before/after visual (an off-brand button color flagged inline) — that's the moment that actually differentiates Foundry from "AI logo generator."

3. The pricing tiers don't map cleanly to the fear that would make someone upgrade.

Starter → Growth is justified by feature count, but the real reason a founder pays is "my team is about to ship something off-brand and I won't catch it." I'd rename the Growth tier's core feature from "Drift detection on new screens" to something that names the cost of not having it — e.g. "Catch off-brand screens before they ship" — and move it to the top of that tier's list instead of third, since it's the feature that actually converts, not just the one that's technically most advanced.
