

FL-01 Workflow Audit: AI Fluency Framework & Foundations

Name: Sibgha Mursaleen

Submission: FL-01 – Workflow Audit

Date: July 12, 2026

Workflow Audit

Task	Classification	Rationale
Write Python code for projects or internships	Collaborate with AI	AI helps generate ideas and explain code, but I need to understand, modify, and test the solution myself.
Plan my weekly study and project work	Just Me	AI can suggest a plan, but I decide my priorities based on my goals and deadlines.
Debug Python code	Collaborate with AI	AI helps identify errors and suggest fixes, but I test, verify, and understand the solution before using it.
Take notes while learning	Just Me	Writing notes in my own words helps me understand and remember concepts better.
Test projects before submission.	Collaborate with AI	AI can suggest test cases, identify potential issues, and help interpret errors, but I must run the tests, verify the results, and ensure the project meets the requirements.
Research technical topics when needed	Delegate to AI with Review	AI can summarize and organize information, but I verify its accuracy and consult reliable sources when needed.
Write reports or assignment documentation	Collaborate with AI	AI improves structure and writing, but I provide the technical content and verify its correctness.
Update GitHub/portfolio	Collaborate with AI	AI helps create professional descriptions, but I choose the projects and ensure they accurately represent my work.

Read technical articles/documentation	Just Me	Reading documentation myself helps me build a deeper understanding and become a more independent developer.
Practice programming or learn new technologies	Collaborate with AI	AI explains concepts and answers questions, but I practice, solve problems, and build projects myself.

Three Target Task

Task 1: Write Python code for projects or internships

Success definition

- Meets all assignment requirements.
- Runs without errors.
- Code is readable and organized.
- I understand the solution before submitting.

Task 2: Debug Python code

Success definition

- Root cause identified.
- Bug fixed successfully.
- No new bugs introduced.
- I understand why the issue occurred.

Task 3: Write reports or assignment documentation

Success definition

- Technically accurate.
- Well-structured.
- Grammatically correct.
- Easy for others to understand.

Appendix / Evidence
